2)	Abbreviations: ES= Eco-Solvent S=Solvent DD=Direct Disperse DS=Dye Sub UV= Ultraviolet Printing L= Latex										
3)	For woven fabrics, we recommend using a hot knife to avoid fraying.										
4)	Where you apply KederTape determines how tightly the graphic will fit in the SEG frame. The correct position of the KederTape depends on three factors; the size of the frame (larger prints will have more stretch than small prints), how much natural stretch the fabric has, and how tight you want the graphic to fit. This will initially require some trial and error, but eventually can be precisely determined. To tighten the fabric face, move KederTape inwards to loosen move outward. For detailed printed instruction, videos, and cut line templates for standard sizes visit www.bannerups.com/segdesign .										
5)	SEG slot size can vary significantly between manufacturers. On thicker fabrics, if using KTAPE-143AS (3mm thick) with the double fold method results in too tight of fit we recommend KTAPE-12715 (1.5mm thick). KTAPE-12715 is also recommended for AGAM brand frames. For installations of canvas and other very thick fabrics, we recommend a single fold installation method. For video instructions visit www.bannerups.com/kedertape .
